

## **Elog Changes and Upgrades (proposed)**

May 20, 2002 - February 5, 2003

### General:

- **Increase Timeout from 15 minutes to 90 minutes**
- Allow users to define an alias for their first name

### Entry:

- **Allow use of forms (selectable from list)**
- **Provide the ability to hyperlink to individual entries**
- Use fixed width text, etc. (tabs, spaces ...) (partially done 7/14/02)
- Easy creation of Tables
- Use "SubGroup" for "SubCategory"
- Add "Importance" level for entry
- Add field for type of entry (maintenance, calibration, inspection, status, breakdown and repair, etc.)
- **Cross posting into different Logbooks**
- Spellchecker (browser plug-in?)
- Make content field required
- Enforce title length maximum

### Search:

- Change default time calculation for Search to end at end of day rather than beginning of the day.
- Investigate ability to search attachments (Oracle Context)

### Images:

- **Capture screen shots from EPICS displays without having to save a file first**
- Handle backslashes in file paths for Windows, and only display file name
- Allow deleting of images
- Allow display of entire image or thumbnails (partially done 7/14/02)
- Use alt tags for images, with user-selected option to turn them on or off

### Attachments:

- Add HTML as an attachment type allowed
- Add Text as an attachment type allowed

### Viewing:

- Selectable chronological or reverse-chronological view of postings
- Multiple-view of user-selectable logbooks
- Distinguish entries that have already been read
- Display ancestors and descendents when viewing a threaded entry
- Add a Navigation Frame
- Organize bookmarks into folder structure
- Provide private and global (shared) bookmarks

Output:

- **Select and send posted entry to groups via email**
- Printer friendly version of individual or grouped posts

## Elog Changes and Upgrades (done)

### Personal page:

- Move “Compose” button to navigation bar (done 7/1/02)
